DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on 13 December 2000. It is noted, however, that applicant has not filed a certified copy of the Japanese application as required by 35 U.S.C. 119(b).

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kado et al. (US 6,603,448) in view of Ono et al. (US 6,656,771).
5. Regarding claim 1, Kado ('448) teaches in column 17, table 2, a phosphor layer comprised of an aluminate compound (see column 13, lines 30-35) having a voidage of not less than 60 volume percent.

6. Further regarding claim 1, Kado ('448) does not disclose the phosphor having a BET specific surface area of not less than $3 \text{ m}^2/\text{g}$.
7. Ono ('771) teaches in the abstract an aluminate phosphor compound having a BET specific surface area of $100 \text{ m}^2/\text{g}$ for the purpose of improving the lighting efficiency of the phosphor.
8. Hence it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the phosphor compound of Ono in combination with the phosphor of Kado for the purpose of improving the lighting efficiency of the phosphor.
9. Regarding claims 2 and 3, Kado ('448) teaches that the phosphor is in a vacuum ultra-violet radiation excited light emitting element, and that the element is a plasma display panel.
